

6-channel BTL driver for CD players

BA5936S

The BA5936S is a 6-channel BTL driver developed for use as the sled motor, spindle motor, actuator, and loading motor driver for CD players. It contains a current limiting function and 5V regulator for compatibility in a wide range of applications.

●Applications

CD players

●Features

- 1) 6-channel BTL driver for CD players.
Contains 4 channels for the focus coil, tracking coil, sled motor, and spindle motor drives; and 2 channels for the loading motor driver.
- 2) Internal 5V regulator with a earth protection circuit (requires an external PNP transistor).
- 3) Internal mute circuit (enables the muting of the driver outputs from all but the loading driver, and muting of the regulator output).
- 4) Internal thermal shutdown circuit.

●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V _{CC}	13.5	V
Power dissipation	P _d	1.7 *1	W
Operating temperature	T _{opr}	-35~+85	°C
Storage temperature	T _{stg}	-55~+150	°C

*1 When isolated.

Reduced by 13.6mW for each increase in Ta of 1°C over 25°C.

*2 When not used as regulator, there is problem with pins 9, 10, and 11 being open.

●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V _{CC}	6~13.2	V

* When not used as regulator, 4.5 to 13.2V.

●Block diagram

● Pin descriptions

Pin No.	Pin name	Function	Pin No.	Pin name	Function
1	OUT1-	Channel 1 negative output	17	OUT4-	Channel 4 negative output
2	OUT1+	Channel 1 positive output	18	OUT4+	Channel 4 positive output
3	OUT2-	Channel 2 negative output	19	OUT5-	Channel 5 negative output
4	OUT2+	Channel 2 positive output	20	OUT5+	Channel 5 positive output
5	IN2	Channel 2 input	21	IN5	Channel 5 input
6	IN1	Channel 1 input	22	IN4	Channel 4 input
7	V _{CC}	V _{CC}	23	V _{CC}	V _{CC}
8	V _{CC}	V _{CC}	24	BIAS IN	Bias input
9	REG-I	Regulator current detector	25	GND	GND
10	REG-B	For connection to base of external transistor	26	GND	GND
11	REG OUT	Constant voltage output (connected to collector of external transistor)	27	MUTE IN	Mute input
			28	IN6-R	Channel 6 reverse input
12	IN3-R	Channel 3 reverse input	29	IN6-F	Channel 6 forward input
13	IN3-F	Channel 3 forward input	30	OUT6+	Channel 6 positive output
14	OUT3+	Channel 3 positive output	31	OUT6-	Channel 6 negative output
15	OUT3-	Channel 3 negative output	32	GND	GND
16	GND	GND			

Note 1: Positive output and negative output are the polarities with respect to the input.

Note 2: Loading positive output and loading negative output are the polarities with respect the mode.

● Input / output circuits

●Electrical characteristics (unless otherwise noted, $T_a = 25^\circ\text{C}$, $V_{CC} = 8\text{V}$, $R_{IN} = 10\text{k}\Omega$, $R_L = 8\Omega$, $V_{BIAS} = 2.5\text{V}$)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Circuit current	I_{CC}	—	13	17	mA	No load
〈All drivers except the loading driver〉						
Output offset voltage	VOO	-50	—	50	mV	—
Maximum output pin-to-pin voltage	VOH	4.0	4.8	—	V	$V_{BIAS}=4\text{V}$, $V_{IN}=V_{BIAS}\pm 4\text{V}$
Closed-loop voltage gain	GVC	6.0	8.0	10.0	dB	$V_{IN}=V_{BIAS}\pm 0.5\text{V}$
Ripple rejection	RR	—	60	—	dB	$V_{IN}=0.1\text{V}_{\text{rms}}$, 100Hz
Slew rate	SR	—	1.0	—	V / μs	100Hz rectangular wave, $3V_{P-P}$ output
Mute on voltage	VMON	—	—	0.5	V	—
Mute off voltage	VMOFF	2.0	—	—	V	—
〈Loading driver〉						
Voltage between outputs F	VOF	2.5	2.9	3.3	V	$V_{FO}=2\text{V}$, $V_{RE}=0\text{V}$
Voltage between outputs R	VOR	-3.3	-2.9	-2.5	V	$V_{FO}=0\text{V}$, $V_{RE}=2\text{V}$
Output voltage range F	VOMF	5.2	5.7	—	V	$V_{FO}=5\text{V}$, $V_{RE}=0\text{V}$
Output voltage range R	VOMR	—	-5.7	-5.2	V	$V_{FO}=0\text{V}$, $V_{RE}=5\text{V}$
Output load regulation F	ΔV_F	—	100	500	mV	$V_{FO}=3\text{V}$, $V_{RE}=0\text{V}$
Output load regulation R	ΔV_R	—	100	500	mV	$I=100\rightarrow 400\text{mA}$
Output offset voltage	VOOL	-50	—	50	mV	During braking; voltage between outputs
Forward input current	IFO	—	—	500	μA	$V_{FO}=5\text{V}$, $V_{RE}=0\text{V}$
Reverse input current	IRE	—	—	500	μA	$V_{FO}=0\text{V}$, $V_{RE}=5\text{V}$
〈Regulator〉						
Output voltage	Vreg	4.75	5.00	5.25	V	$I_L=100\text{mA}$
Output load regulation	ΔV_{RL}	-50	0	10	mV	$I_L=0\sim 200\text{mA}$
Power supply voltage regulation	$\Delta V_{V_{CC}}$	-15	21	60	mV	$V_{CC}=6\sim 13.2\text{V}$, $I_L=100\text{mA}$
Base drive current when grounded	$I_{\text{reg-B}}$	220	350	480	μA	$I_L=0\text{mA}$
Current detection threshold voltage	Vreg-I	540	675	810	mV	—

©Not designed for radiation resistance.

● Measurement circuit

Fig.1

●Application example

Fig.2

● Operation notes

(1) Output mode switch for loading motor driver

($V_{CC} = 8V$)

FWD	REV	Loading output
L	L	Brake
	H	Reverse ($V_o = 1.5 \times V_{RE}$)
H	L	Forward ($V_o = 1.5 \times V_{FO}$)
	H	($V_o = 1.5 \times (V_{FO} - V_{RE})$)

Note: The low level voltage (L) is set to that $L < V_F$ (approx. 0.6V).
Loading driver gain is 3.5dB.

(2) Loading motor driver voltage setting

(ex: forward mode)

When $V_{FO} < V_F$ (approx. 0.6V), $V_{FO} = 0V$

When $V_{RE} < V_F$ (approx. 0.6V), $V_{RE} = 0V$

(3) The BA5936S contains a thermal shutdown circuit. When the chip temperature reaches 175°C (Typ.), the output current is muted.

If the chip temperature then drops below 150°C (Typ.), then the mute is released.

(4) By having the mute pin (pin 27) voltage open or lowered to 0.5V or below, the output currents (channels 1, 2, 4, and 5, and regulator) can be muted.

For normal conditions, have the voltage at pin 27 pull-up to 2V.

(5) If the voltage of the bias pin (pin 24) drops below 1.4V (Typ.), the drivers (channels 1, 2, 4, and 5) are muted. For normal conditions, have the voltage at 1.6V or greater.

(6) If the voltage of the thermal shutdown or bias pin drops, the mute is activated; however, in both these situations, only the drivers and regulator are muted. Also, the output pin voltage becomes the internal bias voltage (approx. $(V_{CC} - V_F)/2$ [for channels 1, 2, 4, and 5], $V_{CC}/2$ [for channels 3 and 6]).

= Supplement =

Various mute function and corresponding driver and regulator operating conditions

	ch1, 2, 4, 5	ch3, 6	Regulator
Mute	STOP	ACT	STOP
Bias-drop mute	STOP	ACT	ACT
Thermal shutdown	STOP	STOP	ACT

(7) Connect a bypass capacitor (approx. $0.1\mu\text{F}$) between the bases of the power supply pins of this IC.

(8) The regulator characteristics are explained below. The limiting current and ground current can be set by changing the external current limiting resistor and external PNP transistor hfe.

* Do not use loads that will change the regulator load characteristics and regulator current limiting characteristics. Doing so may cause start-up malfunctions.

(9) The application example will assure excellent results, but nevertheless, be sure to carefully check all characteristics during use. During use with constants in the external circuitry modified, be sure to leave a sufficient margin in order to take into consideration fluctuations in the static and transient characteristics of the external components and this IC.

Also, be aware that ROHM has not sufficiently performed all confirmations regarding patent rights.

- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document use silicon as a basic material.
Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
