Sensor Switch

## PERFORMANCE

1. Automatic human sensor: the light can be turned on automatically when people come, and can be turned off automatically when people go.
2. Easy installation, safety and energy saving. the rate of electricity saving is more than 85%.
3. Adopt non-contact electronic switch, does not produce sparks, do not interfere with other electrical appliances.
4. Strong anti-interference, low power-wear and long using life.
5. Intellective time-delay. The service load will keep working when some body moves about in the detecting area and the delay time can be adjusted.

## NOTES

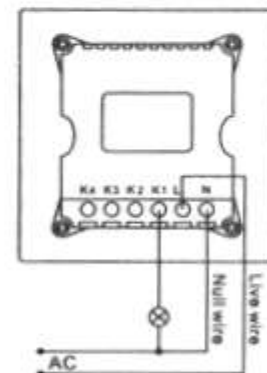

1. This product is suitable for lamps, exhaust fans and so on.. The rated power is 25-200W.
2. The bulb will flash 1-3 times after the power supply is connected. And it will lights for about 30 seconds again. The bulb will start to be in normal working state only after that (No one in the detecting area moves about).
3. The white film is the lens of receiving the infrared ray, please don't scratch. please use soft cloths to clean it carefully when there is besmirched.
4. The transverse sensitivity is better than the straight sensitivity.
5. Don't expose this product directly to the open area when using it..

## TECHNICAL PARAMETERS

1. Working voltage: AC 200V-250V 50Hz-60Hz
  2. Type of load: 1000W-25W lamps or exhaust fan.
  3. Detecting range: 8m
  4. Detecting angle: 115 degree
  5. The delay time: 40---200 seconds
- \*The sound and light control sensor switch trigger volume of this product is 40db

## USAGE

Should be fixed position the product according to use range (distance or angle) before installation. The detecting range of this product can reach 10m and the detecting angle is 115 degree. Wiring diagram

Guarantee for one year
