## Electronic Volume Control for Car Audio Systems

### Overview

The LC75383E is an electronic volume control that provides volume, balance, fader, bass/treble, input switching and input level controls. The LC75383E supports all these functions while requiring a minimum number of external components.

### Features

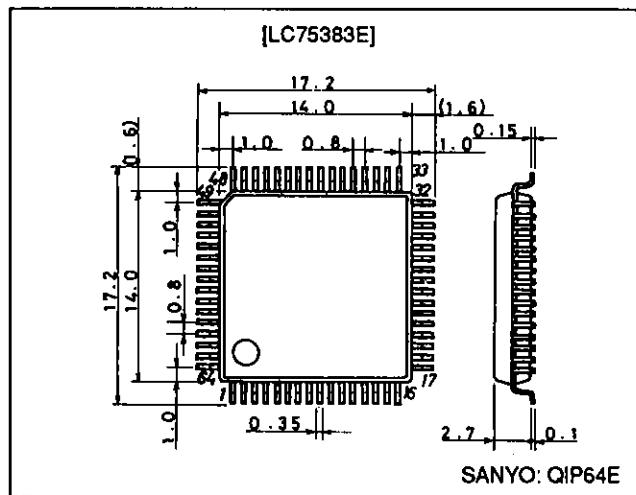

- Volume: 0 dB to -79 dB (in 1 dB steps) and  $-\infty$ ; 81 positions.
- A balance function can be implemented using the LC75383E independent left and right volume control functions.
- Fader: The rear channels or the front channels can be attenuated over 16 positions: from 0 dB to -20 dB in 2 dB steps, from -20 dB to -25 dB in one 5 dB step, from -25 dB to -45 dB in 10 dB steps, -60 dB, and  $-\infty$  for a total of 16 positions.
- Bass/treble: The LC75383E supports 21 position bass and treble controls using external capacitors.
- Input selector: The LC75383E can select one of four L/R inputs. The selected input signal can be amplified from 0 dB to +18 dB in 6 dB steps.
- Built-in operational amplifiers mean that few external components are required.
- Silicon gate process for minimal switching noise.
- All controls can be set from serial input data (CCB).

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

### Package Dimensions

unit: mm

3159-QFP64E

### Specifications

**Absolute Maximum Ratings at  $T_a = 25^\circ\text{C}$ ,  $V_{SS} = 0 \text{ V}$**

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD}$ max	$V_{DD}$	12	V
Maximum input voltage	$V_{IN}$ max	CL, DI, CE, LTIN, RTIN, L10dBIN, R10dBIN, L1dBIN, R1dBIN, LFIN, RFIN, L1 to L4, R1 to R4	$V_{SS} - 0.3$ to $V_{DD} + 0.3$	V
Allowable power dissipation	$P_d$ max	$T_a \leq 85^\circ\text{C}$	310	mW
Operating temperature	$T_{opr}$		-40 to +85	°C
Storage temperature	$T_{stg}$		-50 to +125	°C

**SANYO Electric Co., Ltd. Semiconductor Business Headquarters**

TOKYO OFFICE Tokyo Bldg., 1-10, 1 Chome, Ueno, Taito-ku, TOKYO, 110 JAPAN

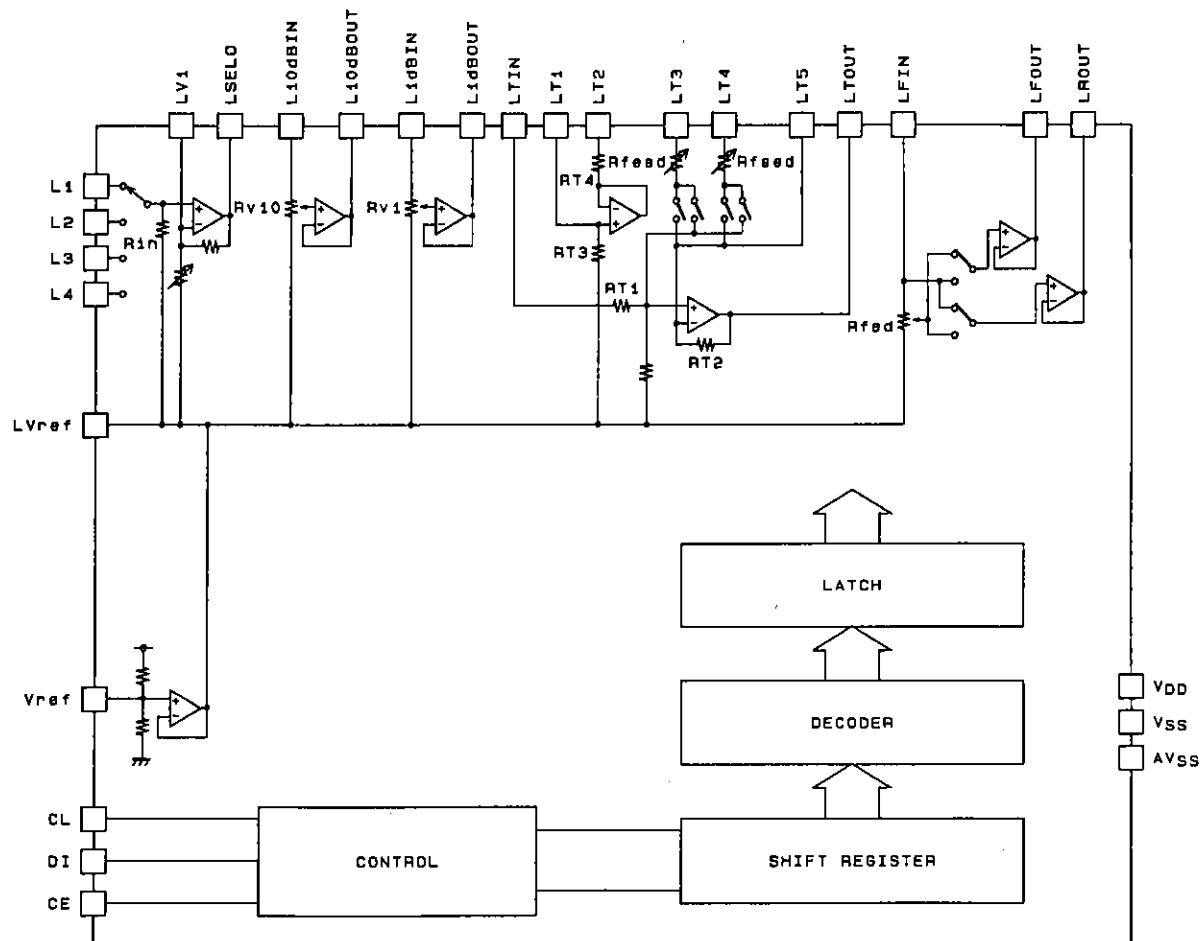

**Allowable Operating Ranges at  $T_a = 25^\circ\text{C}$ ,  $V_{SS} = 0 \text{ V}$** 

Parameter	Symbol	Conditions	min	typ	max	Unit
Supply voltage	$V_{DD}$	$V_{DD}$	6.0		11.0	V
Input high level voltage	$V_{IH}$	CL, DI, CE	4.0		$V_{DD}$	V
Input low level voltage	$V_{IL}$	CL, DI, CE	$V_{SS}$		1.0	V
Input voltage amplitude	$V_{IN}$	LTIN, RTIN, L10dBIN, R10dBIN, L1dBIN, R1dBIN, LFIN, RFIN, L1 to L4, R1 to R4	$V_{SS}$		$V_{DD}$	Vp-p
Input pulse width	$t_{EW}$	CL	1			$\mu\text{s}$
Setup time	$t_{SETUP}$	CL, DI, CE	1			$\mu\text{s}$
Hold time	$t_{HOLD}$	CL, DI, CE	1			$\mu\text{s}$
Operating frequency	$f_{opg}$	CL			500	kHz

**Electrical Characteristics at  $T_a = 25^\circ\text{C}$ ,  $V_{DD} = 9 \text{ V}$ ,  $V_{SS} = 0 \text{ V}$** 

Parameter	Symbol	Conditions	min	typ	max	Unit

## 1 dB Step Volume Control Equivalent Circuit

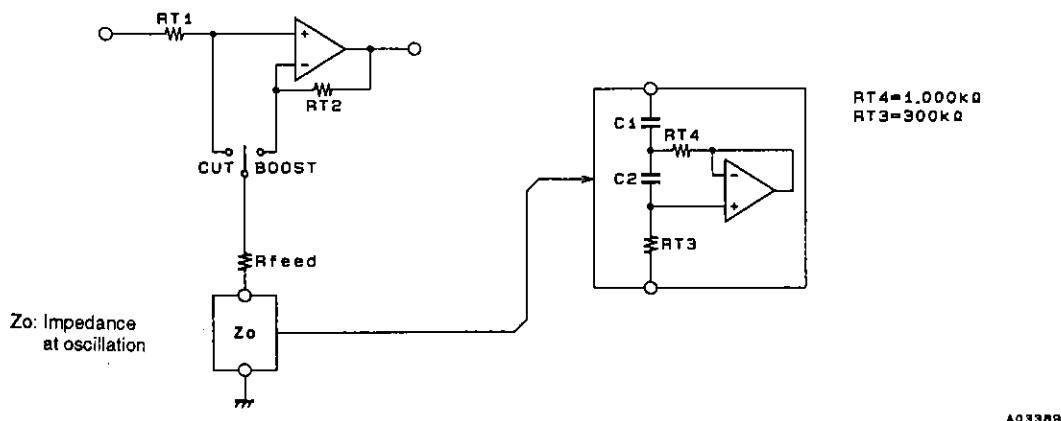

## Tone Block Equivalent Circuit

### Sample Calculation for the Tone Block External Capacitors

The external capacitors used with the LC75383E are the structural components in semiconductor inductors, i.e., simulated inductors. Here we present the equivalent circuit and the formulas required to acquire the desired center frequency.

#### 1. Semiconductor inductor equivalent circuit

#### 2. Sample calculation

Specifications: 1) Center frequency:  $F_0 = 100$  Hz

2) Q at maximum boost:  $Q_{\max} = 1.05$

- Derive the sharpness,  $Q_0$ , of the semiconductor inductor itself

$$Q_0 = \frac{(R_{T4} + R_{feed})}{R_{T4}} \times Q_{\max} \approx 2.6481$$

- Calculate  $C_1$

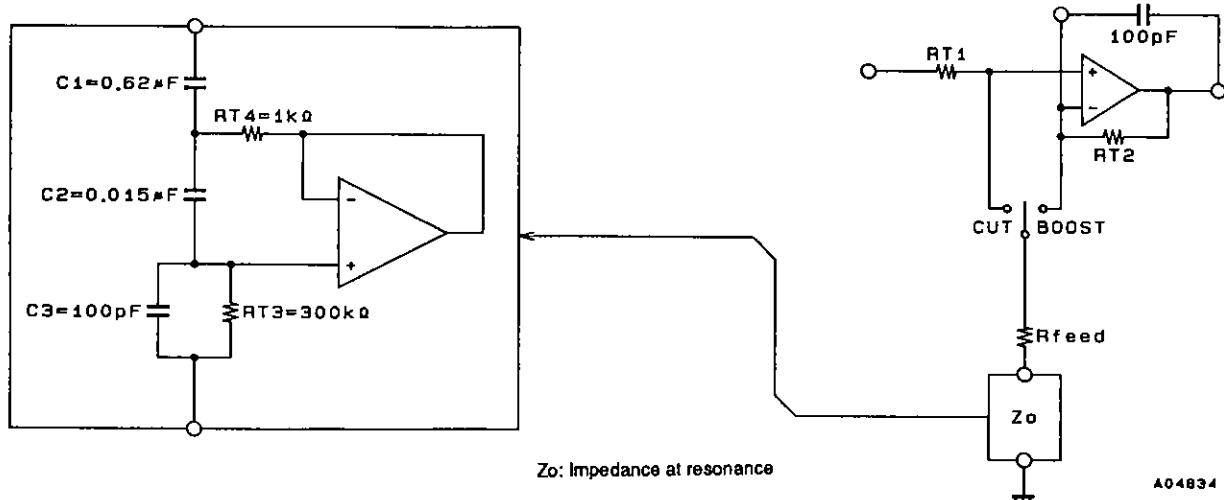

$$C_1 = 1/2\pi F_0 R_{T4} Q_0 \neq 0.60 \text{ } (\mu\text{F})$$

- Calculate  $C_2$

$$C_2 = Q_0 / 2\pi F_0 R_{T3} \neq 0.014 \text{ } (\mu\text{F})$$

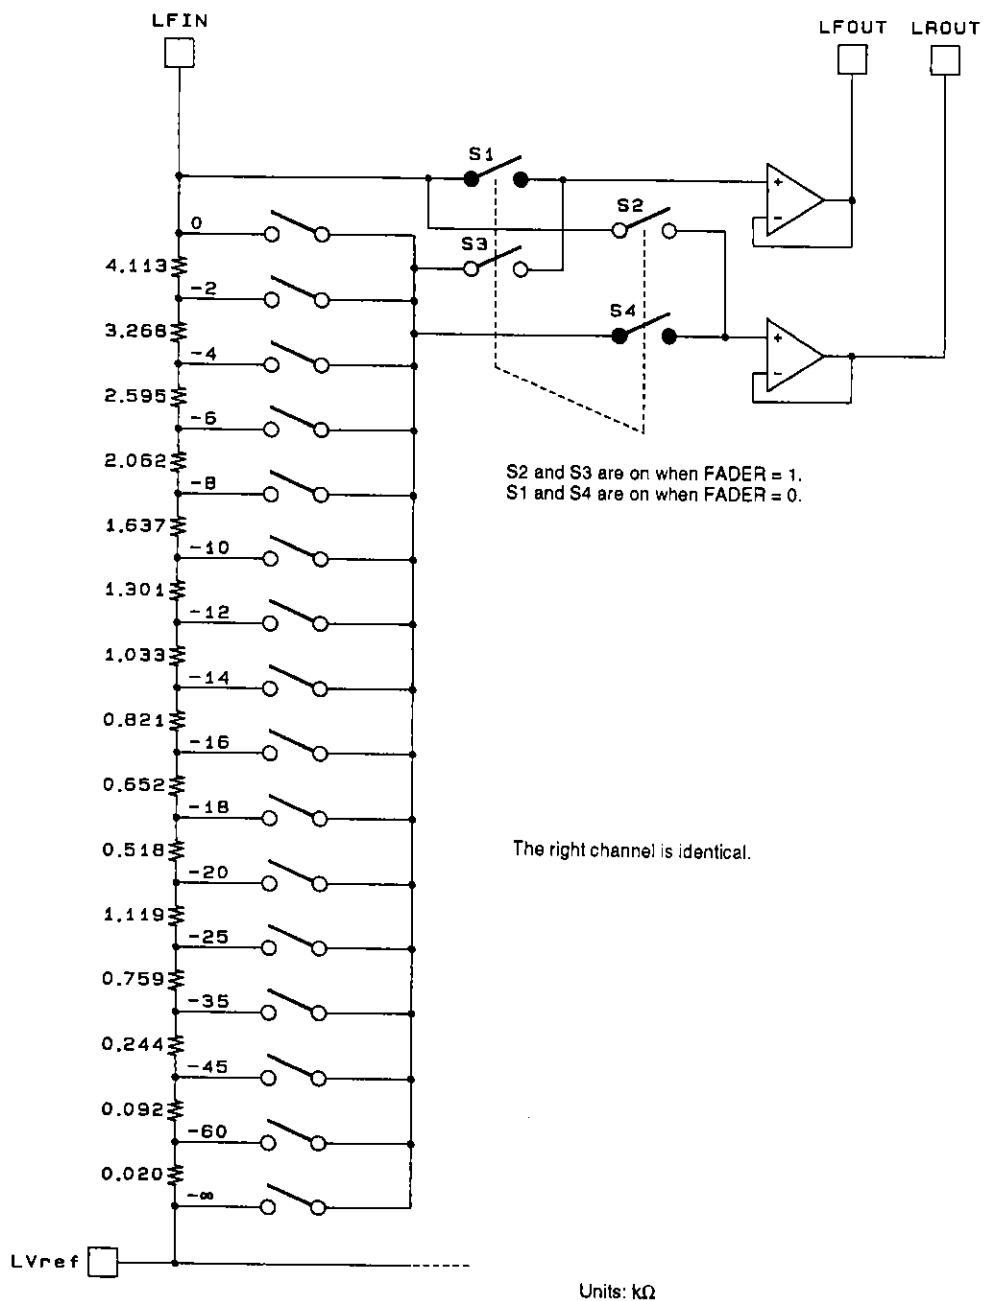

Note: See the tone block equivalent circuit for the internal resistance.

#### Technique for Reducing Noise in the Tone Circuit Output

The output noise can be improved by about 6 dB by providing an external impedance at resonance of  $Z_o$  and adding the capacitor  $C_3$  with a value of about 100 pF. An even larger noise reduction effect can be acquired by using a low noise operational amplifier in the external circuit.

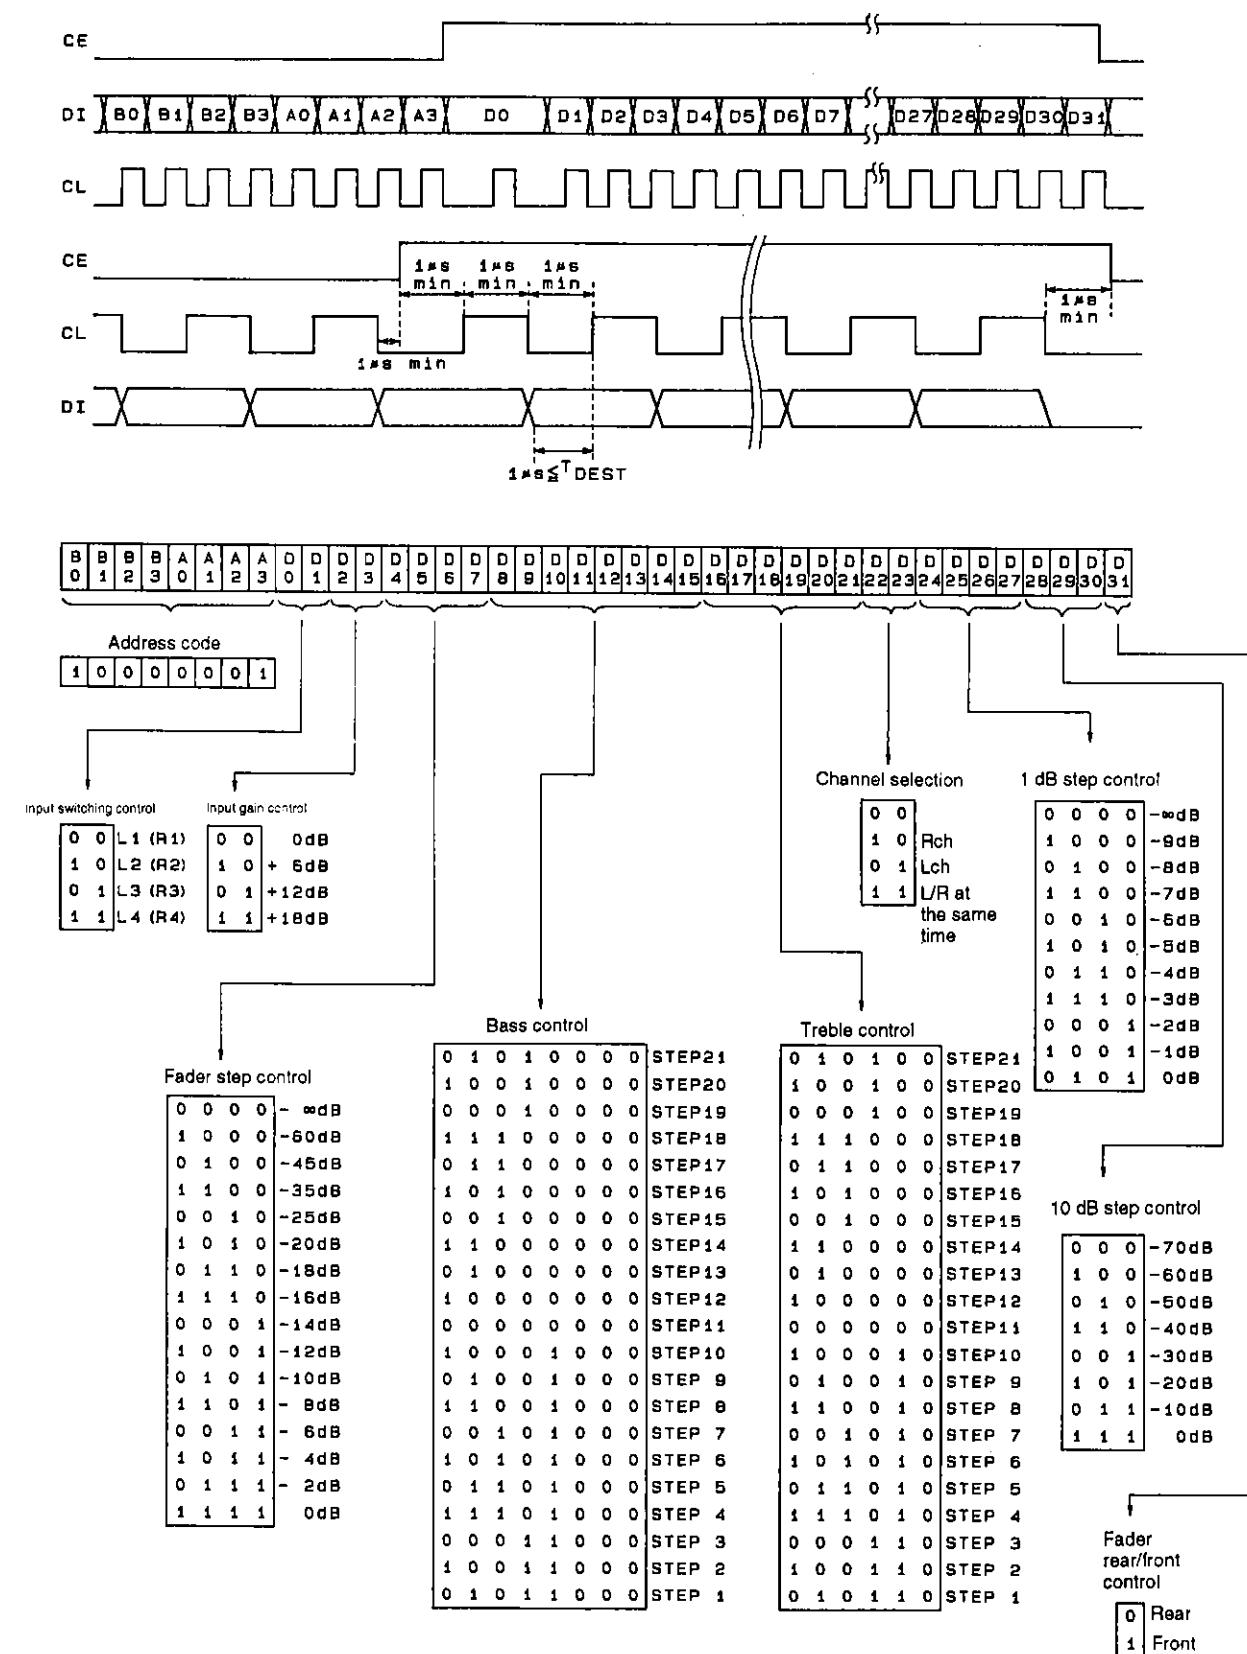

## Fader Volume Control Equivalent Circuit

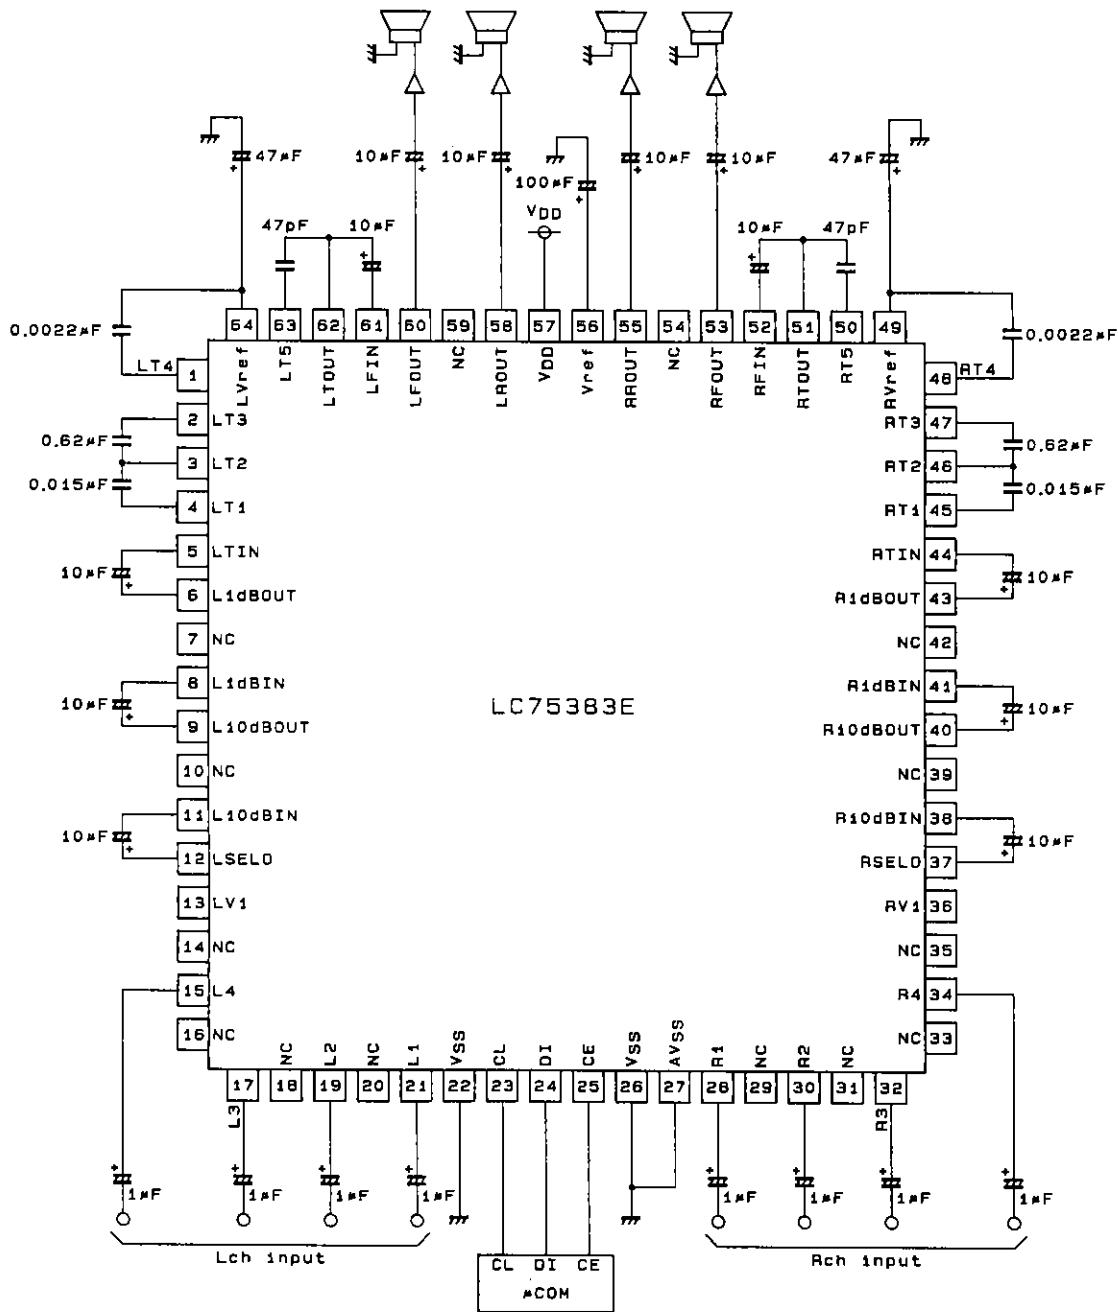

When the main volume 1dBSTEP setting is set to the data value for  $-\infty$ , S1 and S2 will be open and at the same time S3 and S4 will be on.

## Control System Timing and Data Format

The LC75383E is controlled by inputting the stipulated serial data to the CE, CL and DI pins. The data structure consists of a total of 40 bits, of which 8 bits are address and 32 bits are setting data.

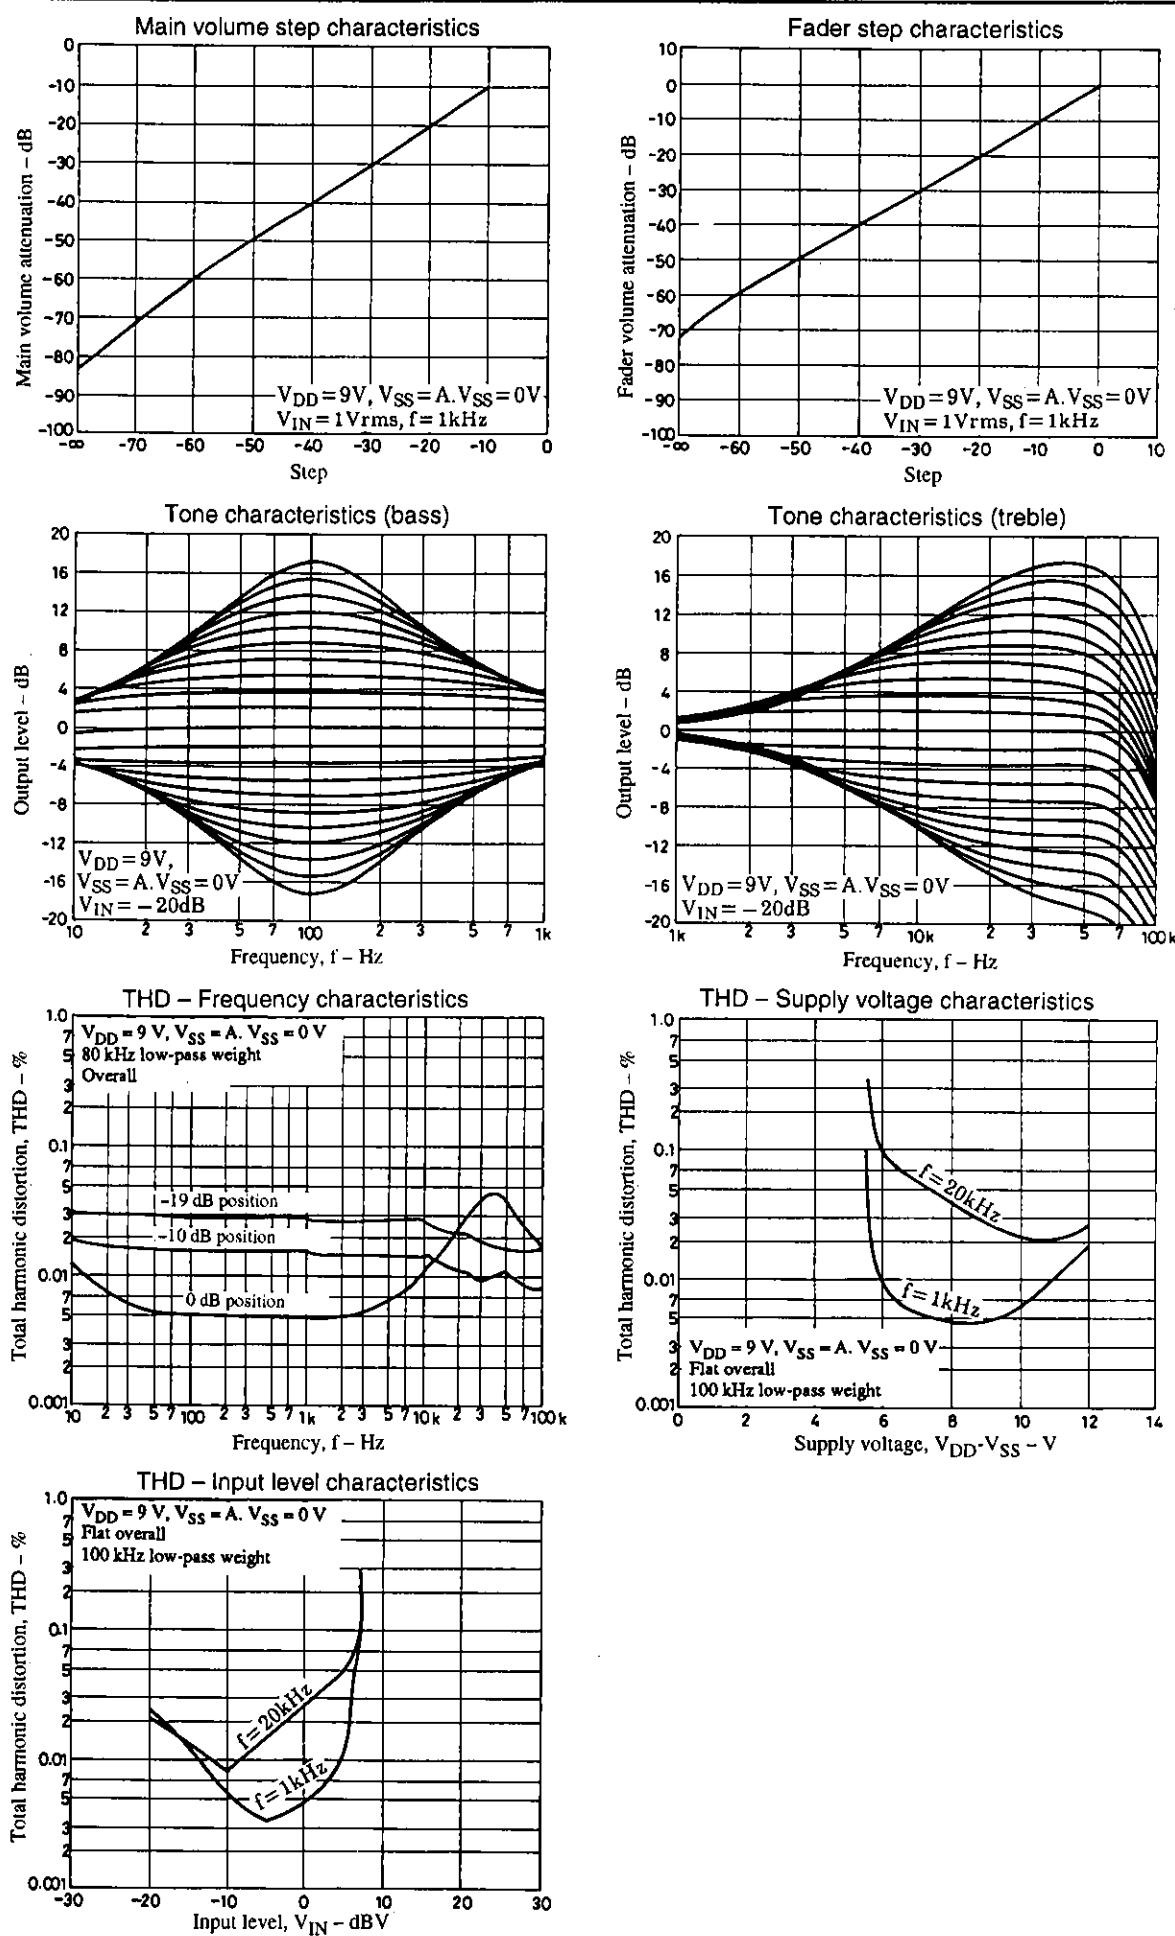

A03391

**Sample Application Circuit**

A033B2

**Usage Notes**

1. The states of the internal analog switches are undefined when power is first applied. Muting should be applied externally until control data has been transferred and stored.
2. The signal lines for the CL, DI and CE pins should either be covered by the pattern ground or be formed from shielded cable to prevent the high-frequency digital signals transmitted over these lines from entering the analog system.
