T-ModemCOM

Internet as mobile as you

T-ModemCOM is simple, but powerful tool for wirelessly connecting personal or industrial computer to the Internet. This device acts like an ordinary modem, controlled by AT commands, so if you have used a fixed line modem before and want to upgrade to wireless modem, almost no changes would be required from your side.

The main advantage of our device is that it has EDGE class 6 connectivity, what grants you highest data rates on GSM networks (up to 177,6 kbps).

You can use this device for connecting your PC to the Internet in remote places, where there is no fixed line. For creating mobile working places, you could also use our T-ModemUSB, which is much more convenient, as it does not require external power supply.

We have got one version of T-ModemCOM with internal antenna and one with external antenna, you can choose the one, which suits you better.

TELTONIKA

GSM

Internet

Technical specification
