

DS12887A Real-Time Clock

www.maxim-ic.com

FEATURES

- Drop-in replacement for IBM AT computer clock/calendar
- Pin compatible with the MC146818B and DS1287A
- Totally nonvolatile with over 10 years of operation in the absence of power
- Self-contained subsystem includes lithium, quartz, and support circuitry
- Counts seconds, minutes, hours, days, day of the week, date, month, and year with leapyear compensation valid up to 2100
- Binary or BCD representation of time, calendar, and alarm
- 12- or 24-hour clock with AM and PM in 12-hour mode
- Daylight Savings Time option
- Selectable between Motorola and Intel bus timing
- Multiplex bus for pin efficiency
- Interfaced with software as 128 RAM locations
 - 14 bytes of clock and control registers
 - 114 bytes of general-purpose RAM
- Programmable square-wave output signal
- Bus-compatible interrupt signals (IRO)
- Three interrupts are separately softwaremaskable and testable
 - Time-of-day alarm once/second to once/day
 - Periodic rates from 122µs to 500ms
 - End-of-clock update cycle

PIN ASSIGNMENT

MOT	1	24	V_{CC}
NC	1 2	23	SQW
NC	3	22	NC
AD0	4	21	RCLR
AD1	5	20	NC
AD2	6	19 🛮	ĪRQ
AD3	7	18	RESET
AD4	8	17	DS
AD5	9	16	NC
AD6	10	15	R/\overline{W}
AD7	11	14	AS
GND	12	13	CS

DS12887A 24-Pin Encapsulated Package

PIN DESCRIPTION

AD0-AD7 - Multiplexed Address/Data Bus

NC - No Connection
MOT - Bus Type Selection

CS - Chip Select
AS - Address Strobe
R/W - Read/Write Input

DS - Data Strobe RESET - Reset Input

IRQ - Interrupt Request OutputSQW - Square-Wave Output

V_{CC} -+5V Supply RCLR - RAM Clear GND - Ground

DESCRIPTION

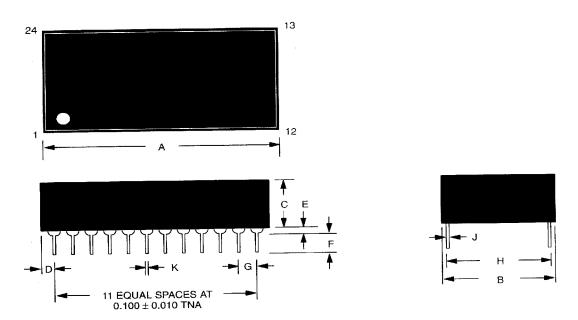

The DS12887A real-time clock plus RAM is designed to be a direct replacement for the DS1287A. The DS12887A is identical in form, fit, and function to the DS1287A, and includes additional 64 bytes of general-purpose RAM. Access to this additional RAM space is determined by the logic level presented on AD6 during the address portion of an access cycle. The RCLR pin is used to clear (set to logic 1) all 114 bytes of general purpose RAM but does not affect the RAM associated with the real-time clock. In order to clear the RAM, RCLR must be forced to an input logic 0 (-0.3V to +0.8V) during battery-backup mode

1 of 2

when V_{CC} is not applied. The RCLR function is designed to be used via human interface (shorting to ground manually or by switch) and not to be driven with external buffers.

For a complete description of operating conditions, electrical characteristics, bus timing and pin descriptions other than RCLR, see the DS12887 data sheet.

Note: Pins 2, 3, 16, 20, and 22 are missing by design. This device cannot be stored or shipped in conductive material that will give a continuity path between the RAM clear pin and ground.
