### Requirement on output load

This module can operate efficiently and reliably if the minimum output load is **not less than 10%** of the full load. If the actual output power is very small, please connect a resistor with proper resistance at the output end in parallel to increase the load.

**It is recommended to connect ceramic capacitor or electrolytic capacitor at the input and output of the DCDC converter. Do not use Tantalum capacitors.**

**It is not recommended to increase the output power capability by connecting two or more converters in parallel. The product is not hot-swappable.**

**No parallel connection or plug and play.**
