

# TA8891N

## AKB (AUTOMATIC KINESCOPE BIAS) IC

TA8891N makes cut-off voltages and gains of R/G/B outputs free from adjustment, and adjusts the white balance of CRT automatically.

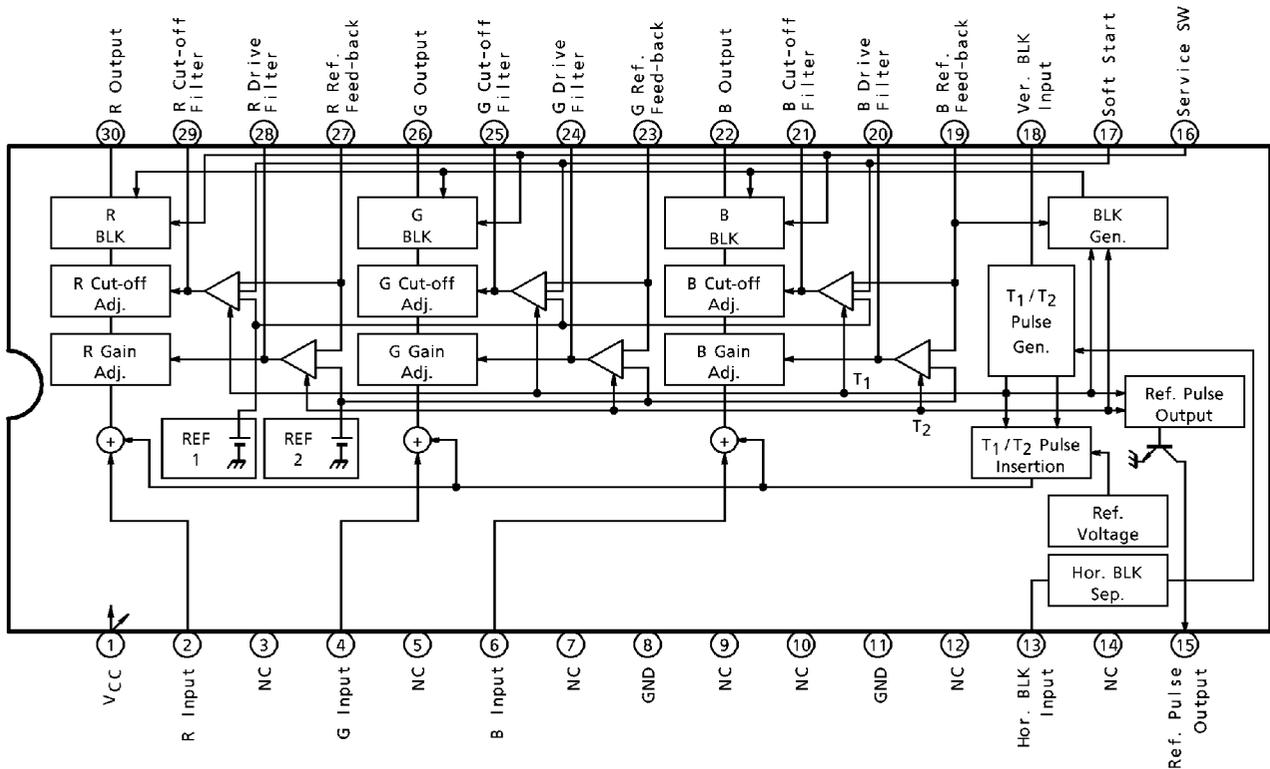

R/G/B inputs are DC coupling. Therefore, the brightness which has been controlled on previous stage is effective.

SDIP30-P-400-1.78

Weight : 2.98g (Typ.)

### BLOCK DIAGRAM

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

TERMINAL FUNCTION

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
1	VCC	Supply 12V.	—
2 4 6	R Input G Input B Input	The terminals for R/G/B inputs. Input signals with DC coupling, whose pedestal levels are 3.0V.	
3 5 7 9 10 12 14	NC	Non-connected pins. Leave these pins open or grounded.	—
8 11	GND	—	—
13	Horizontal Blanking Input	The terminal for horizontal blanking input. Hor. BLK pulse is used to blank R/G/B outputs and to generate T <sub>1</sub> /T <sub>2</sub> pulses.	
15	Reference Pulse Output	The terminal for Ref. pulse output (open collector). Ref. Pulse turn to low during T <sub>1</sub> /T <sub>2</sub> pulse period. T <sub>1</sub> pulse is reference for cut-off, and T <sub>2</sub> is for gain.	
16	Service SW	The terminal for service mode SW. Supplied 1.5V or more to this terminal, TA8891N turns to service mode. On service mode, R/G/B outputs turn to T <sub>1</sub> pulse levels.

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
17	Soft Start	<p>The terminal for SOFT START. Supplied 0.9V or more to this terminal, cut-off is set minimum.</p> <p>While cathode currents are not enough right after POWER ON, supply 0.9V or more and prevent that the screen starts with white.</p>	
18	Vertical Blanking Input	<p>The terminal for Vertical blanking pulse. From the end of this pulse, T<sub>1</sub> pulse are outputted during 1H, and next 1H T<sub>2</sub> pulses come out of R/G/B outputs.</p>	
19 23 27	B Ref. Feed-back G Ref. Feed-back R Ref. Feed-back	<p>The terminals for R/G/B references feed-back. The reference voltages, that are transformed from cathode currents by detection resistances, are fed-back.</p>	

PIN No.	PIN NAME	FUNCTION	INTERFACE CIRCUIT
20 24 28	B Drive Filter G Drive Filter R Drive Filter	The terminals for drive filters. These filters hold the output of drive comparators during 1V. Voltages of these terminals adjust R / G / B gains so that feed-back voltages during T <sub>2</sub> become 5V. Please use low leakage capacitors for these filters.	
21 25 29	B Cut-off Filter G Cut-off Filter R Cut-off Filter	The terminals for cut-off filters. These filters hold the output of cut-off comparators during 1V. Voltages of these terminals adjust R / G / B cut-off voltages so that feed-back voltages during T <sub>1</sub> become 0.5V. Please use low leakage capacitors for these filters.	
22 26 30	B Output G Output R Output	The terminals for R / G / B outputs. Output levels during BLK period is 1.0V.	

**MAXIMUM RATINGS** (Ta = 25°C)

CHARACTERISTIC	SYMBOL	RATING	UNIT
Power Supply Voltage	V <sub>CC</sub>	15	V
Inputted Signal Level	e <sub>IN</sub>	0~V <sub>CC</sub>	V
R/G/B Output Current	I <sub>OUT</sub>	3.5	mA
Power Dissipation	P <sub>D</sub> (Note)	1.6	W
Operating Temperature	T <sub>opr</sub>	-20~65	°C
Storage Temperature	T <sub>stg</sub>	-55~150	°C

(Note) When using the device at above Ta = 25°C, decrease the power dissipation by 12.8mW for each increase of 1°C.
