Bipolar Analog Integrated Circuit μ PC1892

MATRIX SURROUND SOUND PROCESSOR WITH SOUND PROCESSOR

The μ PC1892 is a specific IC to reproduce surround sound by using phase shifters and a signal matrix.

The μ PC1892 provides wide sound with two speakers, and rich stereophonic sound with three speakers.

In case of stereo signal, the μ PC1892 has the movie mode to reproduce sense of immediacy (for movie) and the music mode to emphasize vocal sound (for music), and it has the simulated mode to make monaural signal into wide deep sound. The modes can be selected freely by using 2-bit parallel control pins.

In addition to this function reproducing surround sound, the μ PC1892 has a general sound processor that has volume, balance, bass and treble control. So it is capable of reducing installation area.

All functions for processing signals of base band sound are provided on one chip.

FEATURES

- Three surround modes are available: movie, music and simulated
- Built in volume and balance control (All control voltage: 0 V to 5 V)
- Built in tone control (bass, treble) (All control voltage: 0 V to 5 V)
- Built in L+R output for woofer SP
- μ PC1892CT-02: The volume and balance attenuation are bigger than μ PC1892CT.

APPLICATION

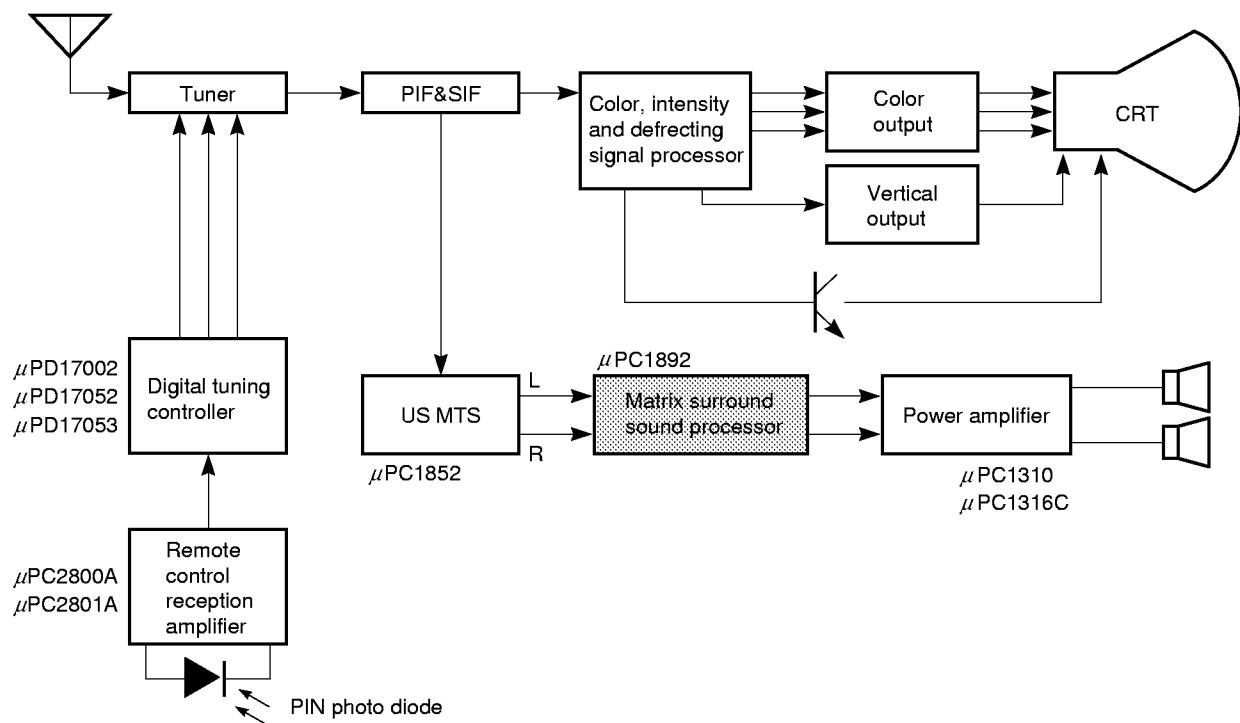

- TV

Movie	L	H
Simulated	H	H

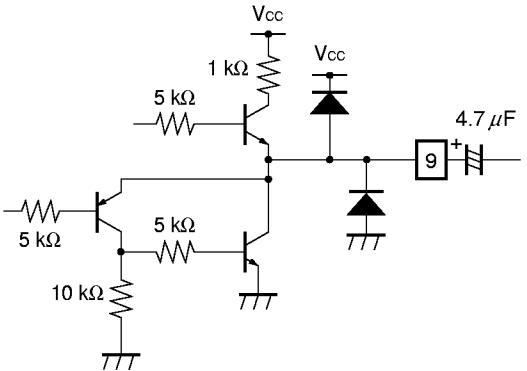

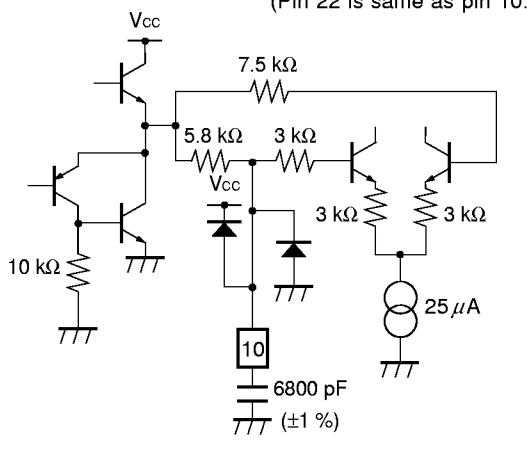

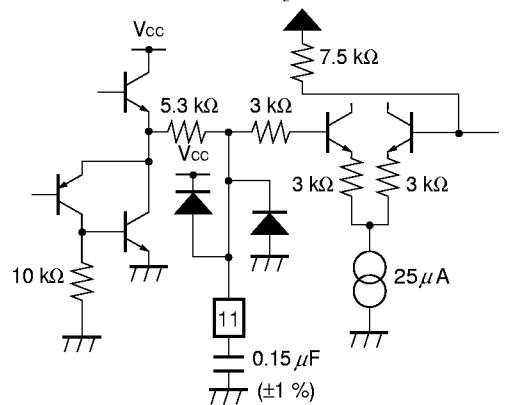

- Cautions**
1. In the case of changing surround mode and power ON/OFF, mute (approx. 200 ms) must be used for pop noise reduction.
 2. Insert resistors between mode select pins (pin 7, 8) and GND, between control pins (pin 16, 17, 18, 19, 20, 23) and GND.
 3. Connect a electrolytic capacitor for power supply as close as possible to Vcc (pin 1).

Remark About "H" and "L", refer to **RECOMMENDED OPERATING CONDITIONS**.

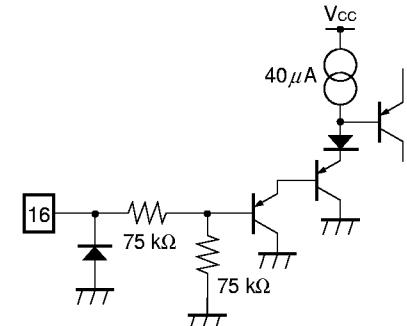

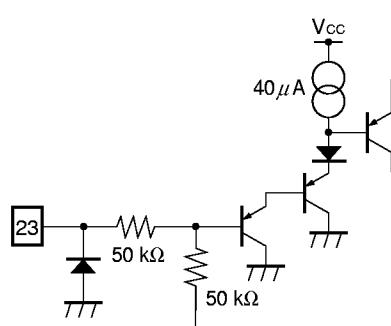

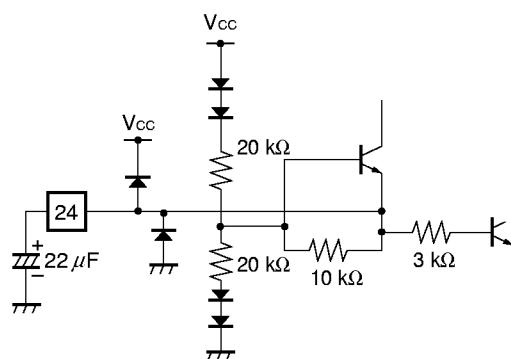

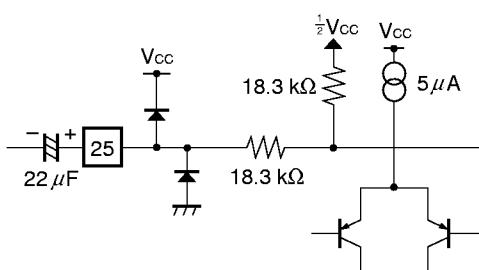

Explanation of Pins (1/4)

Pin number/name	Equivalent circuit	Description
1 Power supply	V _{cc}	Power supply pin.
2 Phase shift filter1 3 Phase shift filter2 4 Phase shift filter3 5 Phase shift filter4	(Pins 3, 4 and 5 are same as pin 2.) 	Capacitor connection pin which determines time constant of phase shifter. Pin 2 is used for movie, music, simulated mode. Pins 2, 3, 4, 5 is used for movie, simulated mode. Recommended value of capacitor is as follows. Pin 2: 0.1 μ F Pin 3: 2200 pF Pin 4, 5: 0.022 μ F
6 Offset filter		Capacitor connection pin which absorbs offset voltage generated by phase shifter.
7 Mode select1 8 Mode select2	(Pin 8 is same as pin 7.) 	Surround mode switch pin. Control by pin 7, 8 (2 bit parallel). Input impedance:approx. 100 kΩ.

CONTROL CHARACTERISTICS

1. Volume Control Characteristics (Lch, Rch)

(1) μ PC1892CT

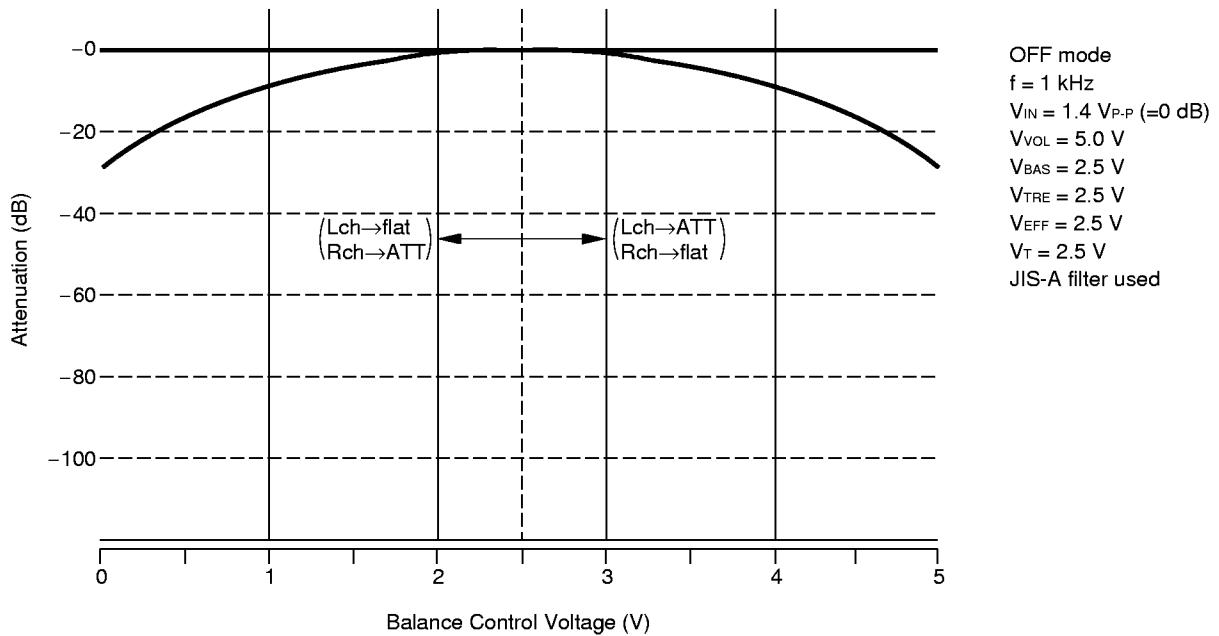

(2) μ PC1892CT-02

Remark L_{L+R}: L+R volume control voltage, V_{BAS}: Bass control voltage,
V_{TRE}: Treble control voltage, V_{EFF}: Effect control voltage,
V_{BAL}: Balance control voltage, V_{VOL}: Volume control voltage,
V_T: Tone control voltage.

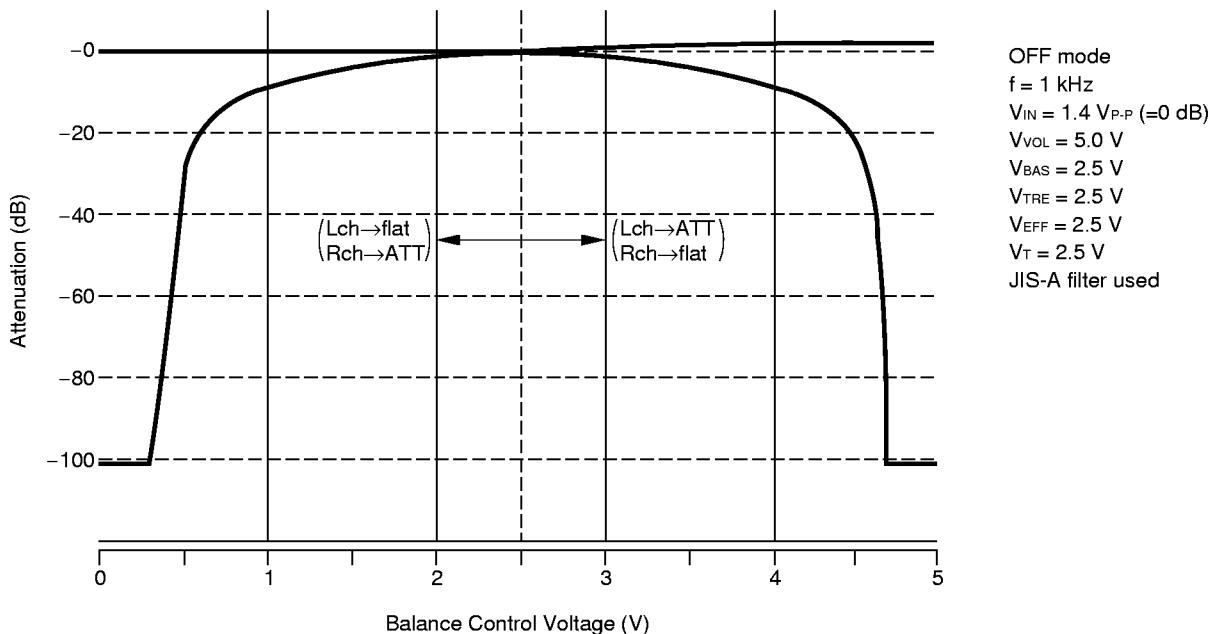

2. Balance Control Characteristics

(1) μ PC1892CT

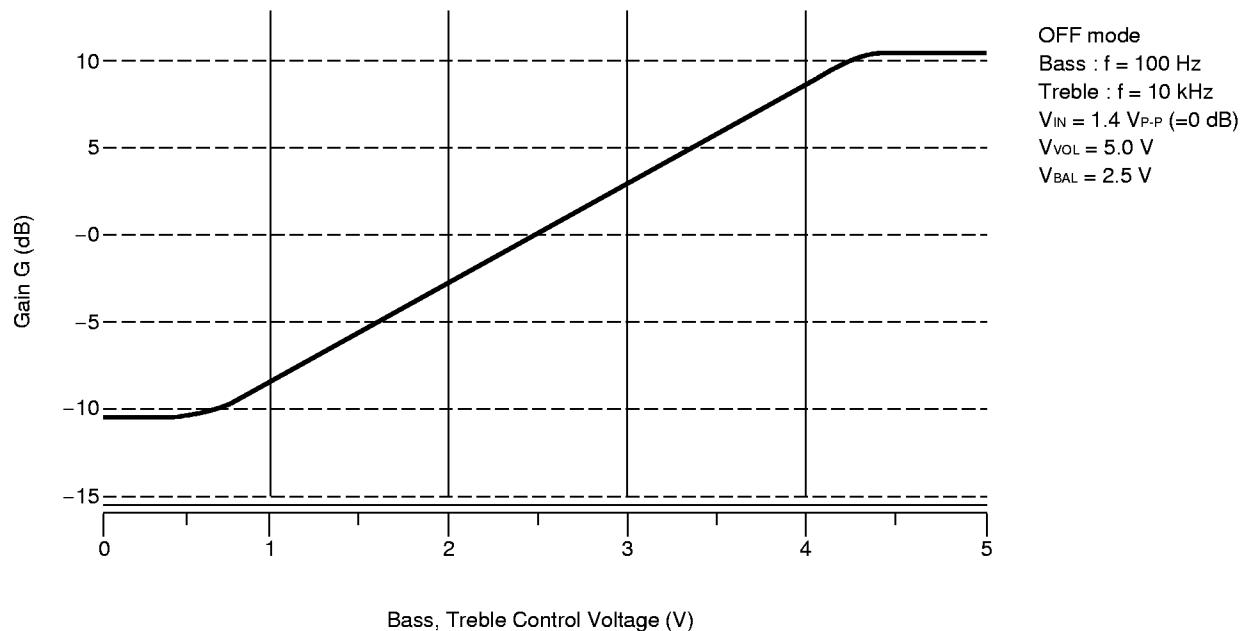

Caution If the control voltage is set to over 5 V, L-channel output level becomes lower.

(2) μ PC1892CT-02

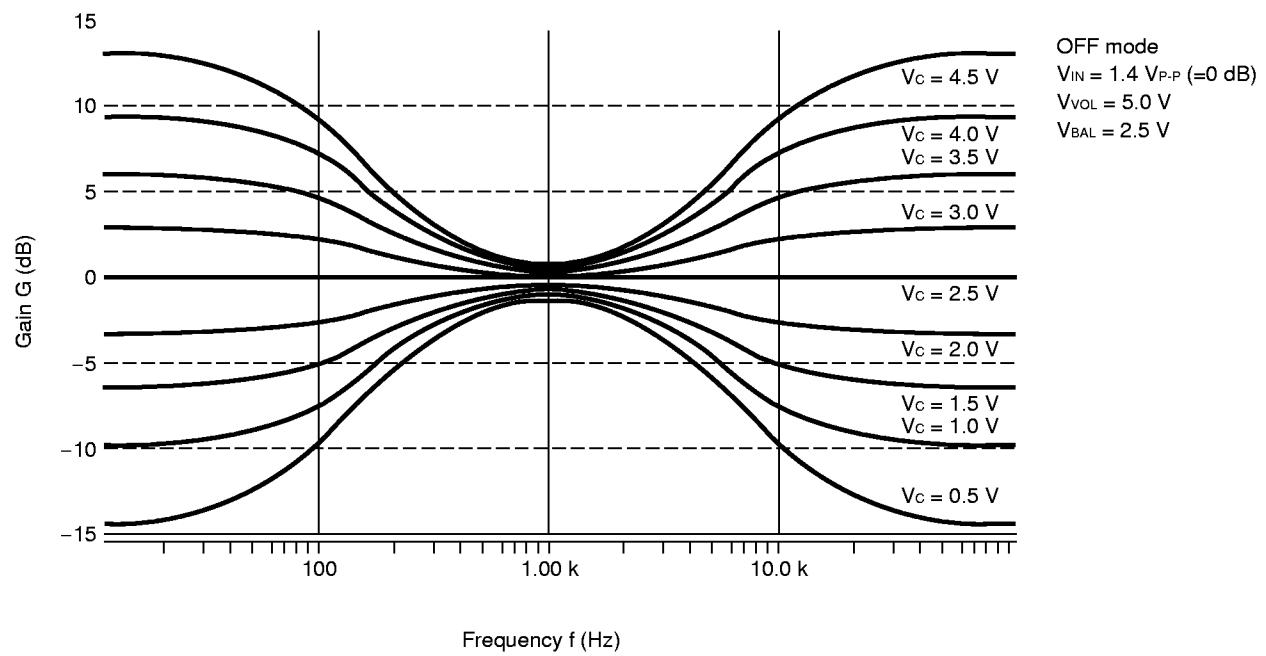

Remark V_{L+R} : L+R volume control voltage, V_{BAS} : Bass control voltage, V_{TRE} : Treble control voltage, V_{EFF} : Effect control voltage, V_{BAL} : Balance control voltage, V_{VOL} : Volume control voltage, V_T : Tone control voltage.

3. Tone Control Characteristics

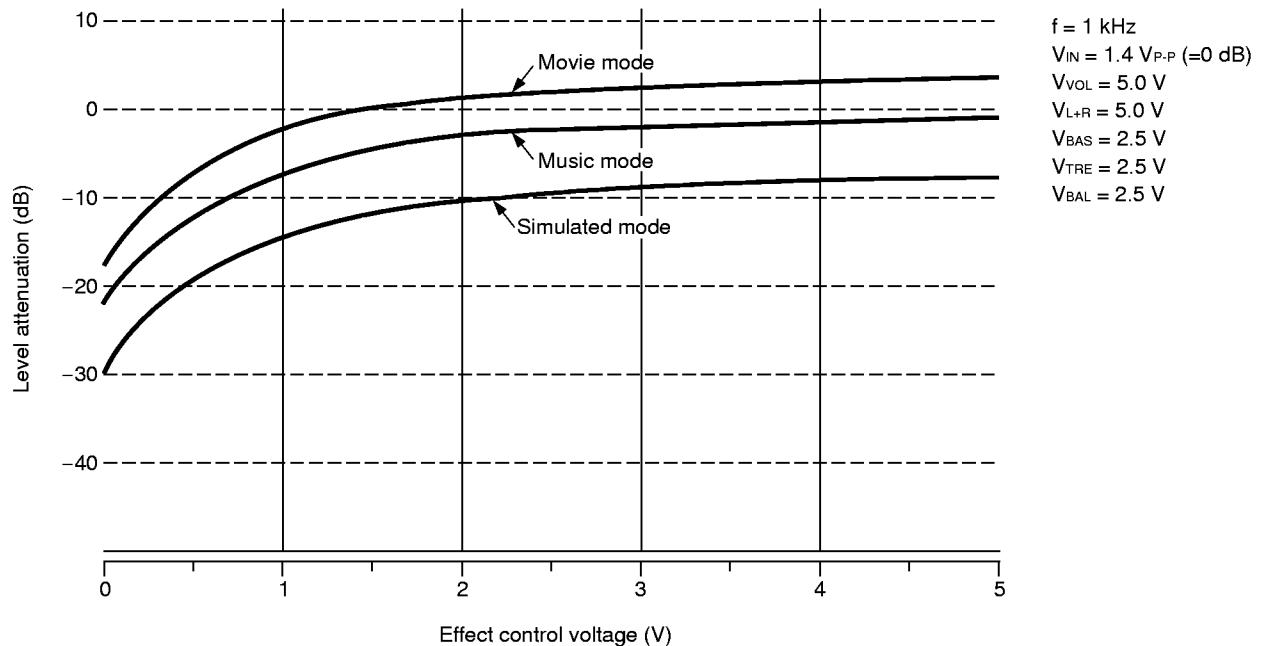

4. Tone Frequency Characteristics

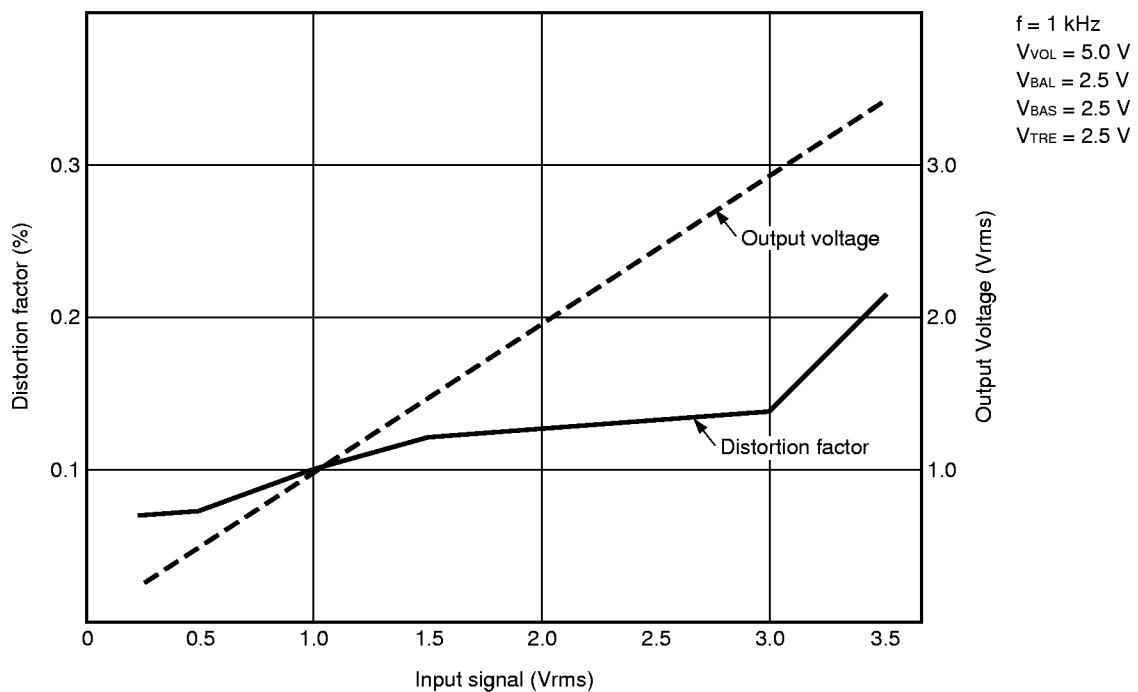

Remark V_{BAL} : Balance control voltage, V_{VOL} : Volume control voltage, V_c : Bass, Treble control voltage.

5. Effect Control Voltage

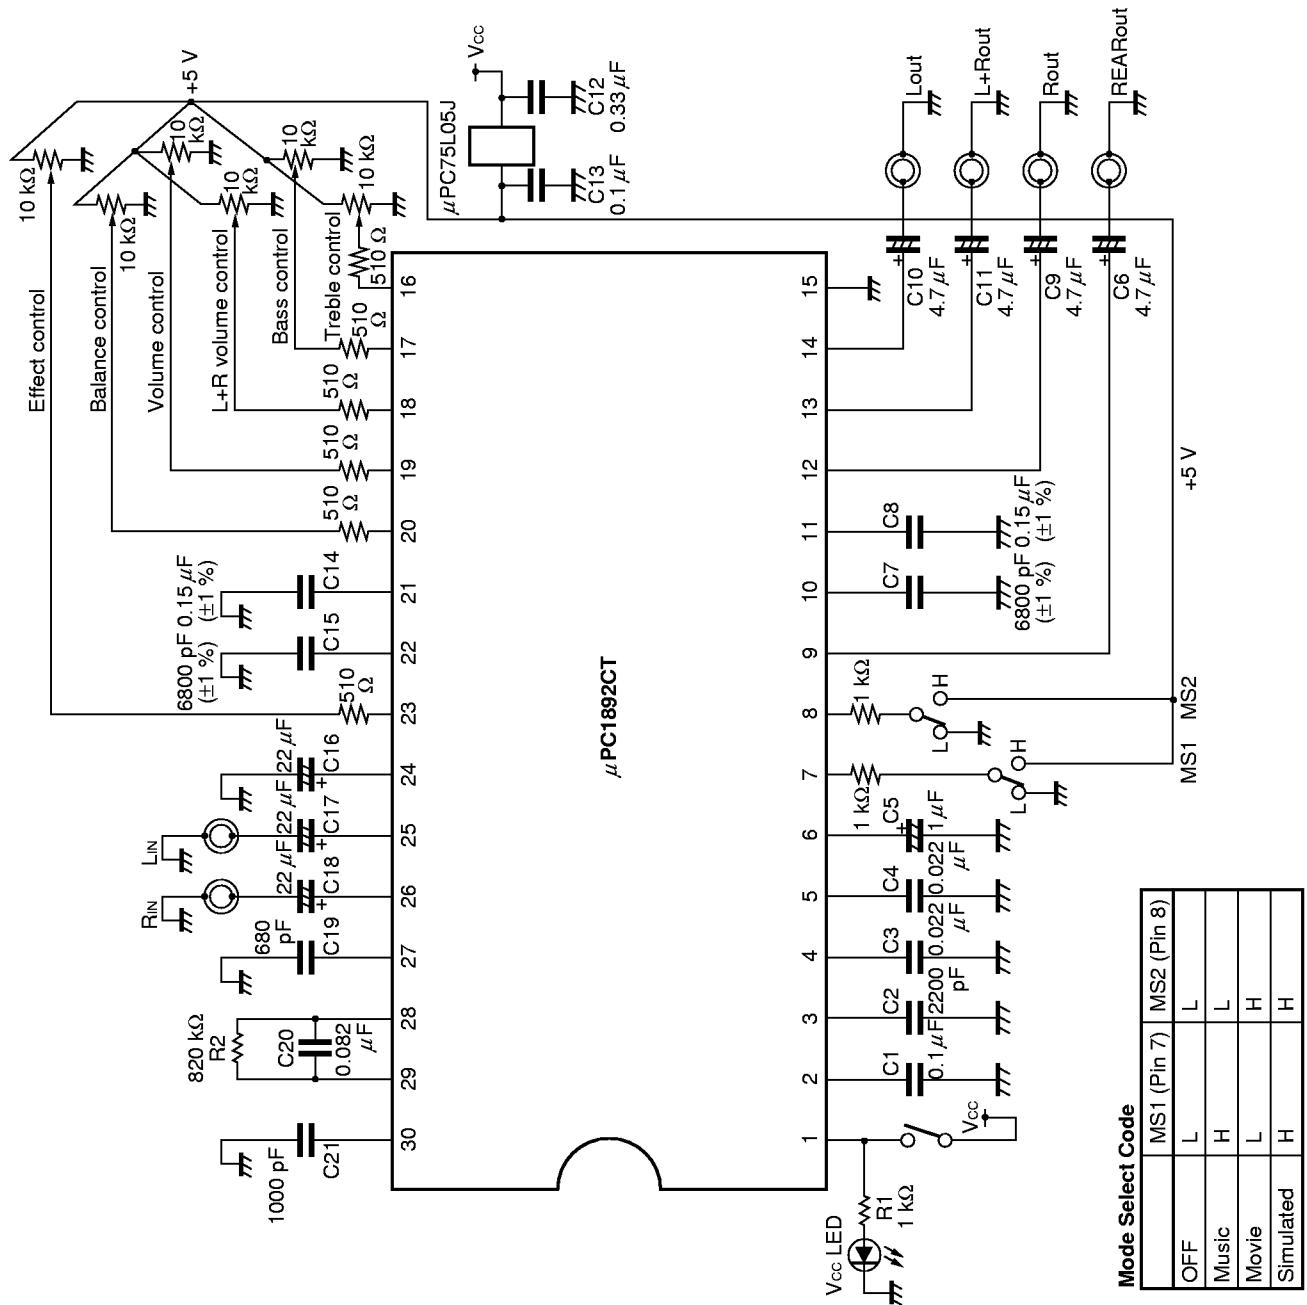

Remark V_{VOL} : Volume control voltage, V_{L+R} : L+R volume control voltage, V_{BAS} : Bass control voltage, V_{TRE} : Treble control voltage, V_{BAL} : Balance control voltage.

RECOMMENDED SOLDERING CONDITIONS

The following conditions (see table below) must be met when soldering this product.

For more details, refer to our document "**SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL**" (IEI-1207).

Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

Type of Through Hole Device

μ PC1892CT : 30-pin plastic shrink DIP (400 mil)

μ PC1892CT-02 : 30-pin plastic shrink DIP (400 mil)

Soldering Process	Soldering Conditions
Wave Soldering (For leads only)	Solder temperature: 260 °C or lower. Flow time: 10 seconds or less.
Partial Heating Method	Pin temperature: 260 °C or lower. Time: 10 seconds or less.

Caution Do not jet molten solder on the surface of package.
